VOLUMES IN SERIES. . . . .	xi

## Section I. Cooperative Binding

1. Analyzing Intermediate State Cooperativity in Hemoglobin	GARY K. ACKERS, JO M. HOLT, E. SETHE BURGIE, AND CONNIE S. YARIAN	3
2. Nuclear Magnetic Resonance Spectroscopy in the Study of Hemoglobin Cooperativity	DOUG BARRICK, JONATHAN A. LUKIN, VIRGIL SIMPLACEANU, AND CHIEN HO	28
3. Evaluating Cooperativity in Dimeric Hemoglobins	ALBERTO BOFFI AND EMILIA CHIANCONE	55
4. Measuring Assembly and Binding in Human Embryonic Hemoglobins	THOMAS BRITAIN	64
5. Small-Angle Scattering Techniques for Analyzing Conformational Transitions in Hemocyanins	HERMANN HARTMANN AND HEINZ DECKER	81
6. Multivalent Protein–Carbohydrate Interactions: Isothermal Titration Microcalorimetry Studies	TARUN K. DAM AND C. FRED BREWER	107
7. Calorimetric Analysis of Mutagenic Effects on Protein–Ligand Interactions	FREDERICK P. SCHWARZ	128
8. Multiple Binding of Ligands to a Linear Biopolymer	YI-DER CHEN	145
9. Probing Site-Specific Energetics in Proteins and Nucleic Acids by Hydrogen Exchange and Nuclear Magnetic Resonance Spectroscopy	IRINA M. RUSSU	152
10. Fluorescence Quenching Methods to Study Protein–Nucleic Acid Interactions	SIDDHARTHA ROY	175

---

11. Thermodynamics, Protein Modification, and Molecular Dynamics in Characterizing Lactose Repressor Protein: Strategies for Complex Analyses of Protein Structure–Function	LISKIN SWINT-KRUSE AND KATHLEEN S. MATTHEWS	188
12. Linked Equilibria in Biotin Repressor Function: Thermodynamic, Structural, and Kinetic Analysis	DOROTHY BECKETT	209
13. Distance Parameters Derived from Time-Resolved Förster Resonance Energy Transfer Measurements and Their Use in Structural Interpretations of Thermodynamic Quantities Associated with Protein–DNA Interactions	LAWRENCE J. PARKHURST	235
